

Department of Mechanical Engineering
Internal Assessment Question paper

Programme: Common to all branches (UG)

Term: 07th Oct 2024 – 25th Jan 2025

Course: Design thinking

Course Code: AECC17

CIE: Test 1 **Semester:** I **Sec:** M,N,O,P,Q,R,S,T,U,V,W & X

Max Marks: 30

Time: 1Hr **Portions for Test:** Lesson Plan – L1 to L10

Instructions to Candidates:

- Answer any 2 out of 3 questions
- Meaningful Sketches to be drawn with pencil and scale only

Sl. No.	Question's	Marks	Blooms level	Course Outcome
1	a) Justify why K12 Lab's 6 key design thinking mindsets are important with suitable examples	10	L3	CO1
	b) Differentiate between NEEDS (FINDINGS) and INSIGHTS with a suitable example	5	L2	CO2
2	a) Choose suitable example and illustrate each phase in the Design Thinking process	10	L3	CO1
	b) Briefly explain i. Immersion ii. Interviews	5	L2	CO2
3	a) What is Design Thinking? How does it work?	5	L2	CO1
	b) Write 10 interview questions to ask ambulance drivers pertaining to problems faced while ferrying patients to the hospital	10	L3	CO2

MOBILE PHONES ARE BANNED IN THE EXAM HALL

Department of Mechanical Engineering

Scheme of Evaluation

Instructions to Candidates:

- Answer any 2 out of 3 questions
- Meaningful Sketches to be drawn with pencil and scale only

Sl. No.	Question's	Marks
1	K12 Lab's six key design thinking mindsets—Creative Confidence, Bias Toward Action, Human-Centered, Show Don't Tell, Radical Collaboration, and Mindful of Process—are vital for fostering innovation and problem-solving in education and beyond. Here's why each is important, with examples: 1. Creative Confidence Importance: Encourages individuals to trust their ability to think creatively and solve problems. Example: A teacher designs an interactive science experiment despite limited resources, inspiring students to explore concepts hands-on. 2. Bias Toward Action Importance: Focuses on learning by doing rather than over-planning, which fosters experimentation and rapid prototyping. Example: Students build a simple prototype of a water filtration system instead of spending weeks researching designs, learning through trial and error. 3. Human-Centered Importance: Emphasizes empathy and understanding the needs of the people you are designing for. Example: A school redesigns its library layout after interviewing students and realizing they prefer flexible seating for group projects. 4. Show Don't Tell Importance: Advocates for visual communication to convey ideas effectively, making abstract concepts tangible.	10

2	a)	Mentioning the Process – 2 marks 5 Stages of Design Thinking  Example – 2 marks Briefly explaining the Process – 6 marks	10
	b)	Briefly explaining the below mentioned with examples - 5 marks i. Immersion ii. Interviews	5
3	a)	Design thinking is a non-linear, iterative process that teams use to understand users, challenge assumptions, redefine problems and create innovative solutions to prototype and test. Involving five phases—Empathize, Define, Ideate, Prototype and Test—it is most useful to tackle problems that are ill-defined or unknown – 3 marks Mention the process below – 2 marks Design Thinking: A 5-Stage Process 	5

	b)	Listing 10 logical questions to ask ambulance drivers regarding problems faced while ferrying patients to the hospital – 1x10 = 10 marks	10
